

Name: RES Americas

Date Printed: 12/07/2019

Posted On: 07/13/2016

Industry: Energy / Utilities

Corporate address: Colorado, Broomfield,

Description

One of the world's leading independent renewable energy companies, with the expertise to develop, engineer, construct, finance, and operate projects around the globe.

#1: In an era of transformational change, our mission is to redefine the way we think about energy. This is a vital transition to a world where everyone has access to affordable low carbon energy.

#2: We operate in both the centralized energy market and the evolving distributed energy market around the world.

#3: From a project team within Sir Robert McAlpine researching early wind turbine technologies in 1982, our global portfolio now exceeds 10 Gigawatts.

#4: Embedding our business, environment, reputation and social principles into our operations, products, and services is powering positive change.

#5: Wind and solar for renewable power generation, and transmission, energy storage, and demand side management as enablers to a low carbon future.

We are pioneers

We believe in doing good by doing good business. In our 30 year history, our expertise has been honed and we are regarded as world class experts in the renewable energy and energy storage industries. Our success is built on our ability to leverage our expertise, innovative spirit, and drive to provide sustainable energy across the world

Being a part of the RES team means shaping the world's energy future.

30 years of expertise

We work together

Our success is built on our ability to leverage our skills, knowledge, and networks. All our teams,

including Development, Technical, Engineering, Construction and Operations, work together to deliver projects. Collaboration is not an option; it is an integral part of how we work. We are all committed to the sustainability of people, planet, and profit.

We value our people

Our people are our most important asset. We are dedicated to the personal and professional development of our employees. The RES values reflect what is important to our employees. Our people are encouraged to explore new opportunities and solutions, and we welcome individuals who share our entrepreneurial spirit and commitment to sustainability.

We've been providing development, engineering, construction and operations services to the utility-scale wind, solar, transmission, energy storage and demand side management (DSM) markets across the United States since 1997.

We've built over 1,000 miles of transmission lines throughout the US and Canada.

RES employs more than 500 full-time professionals and have more than 8,000 MW of renewable energy projects installed or currently under construction in the US. These total an annual production of 25 terawatt hours, and can provide enough electricity for 2.3 million homes. They also prevent 17 million tons of CO2 emissions every year. In addition, we currently have more than 5,300 MW of projects at different stages of development.

Over 500 professionals - 8,000 MW energy portfolio

What we do

Our in-house expertise and skills, combined with over 15 years' experience, means we can provide high-quality, centralized and distributed solutions, that are reliable, economical, and safe in every area, including costing, engineering, procurement, management, and quality and environmental processes. We also specialize in self-performing the construction essential to completing projects - such as building roads and crane pads, foundation excavating and backfilling, underground cabling, erecting overhead lines, and installing turbines and solar panels.

We are experts in third-party engineering, procurement, and construction (EPC) and balance of plant/systems (BOP/BOS) construction services for the renewable energy, transmission, and energy storage industries. We also develop and/or own and operate renewable energy and storage projects.

Landowners and communities

We involve the local community in all of our projects by hosting or participating in meetings and maintaining an open line of communication with a wide range of stakeholders. We do this through public meetings, information brochures, site visits, and direct contact with residents, municipalities, and other community leaders. And, where possible, we use local businesses and suppliers on our projects.

We are committed to creating and maintaining lasting relationships with the communities in which we work.

For the projects we work on, we ensure:

- minimal disturbance to existing land activities
- restoration of land at the end of a project
- open communication
